# CyberPatriot Windows 11

# Training Round 2 Answer Key

Welcome to the CyberPatriot Training Round 2! This image will provide you with information on how to solve common vulnerabilities on a Windows 11 operating system. In doing so, it will help you on your way as you build your cybersecurity skills.

The vulnerabilities in this image are some of the most basic ones found during a CyberPatriot competition. Even if you do very well with these vulnerabilities, you will experience greater difficulty as the season progresses. The README file on the desktop in this image may be more detailed than those you see during the competition. You will have to use your own knowledge, not just the hints in this file, to achieve a high score during the actual competition.

Below are the answers to the problems that are being scored in this image. Each one includes information on how the problem was found (if applicable), how it was solved, and why it is important from a cybersecurity standpoint.

It is also possible to lose points during the competition. Simple penalties that may arise are noted below the answers. There are many ways to solve some of the problems below. This answer key just shows one method in each case.

Coaches will be sent categories of vulnerabilities following each online round.

## Answers

1) **Forensics Question 1**

In the search bar, search **cmd**. Under Command Prompt, select Run as administrator. In the terminal, type the following command: **netstat -abno**

Search for the process that runs on port 445 (Control + F and search 445). Find the PID number in the PID column (4). Review the rest of the output to find for the other TCP process running as PID 4. The line that shows the other system process is:

TCP 192.168.55.136:**139** 0.0.0.0 Listening 4

The port is shown in the Local Address after the semicolon (139).

Answer: 139

2) **Forensics Question 2:**

Press the **Windows key + R** and search **fsmgmt.msc**. Click on **Shares**.

Answer: IPC

3) **Forensics Question 3**

Find a decoding tool such as the one at https://cryptii.com and paste the message in as plain text. Set the tool to Decode and select the Rot 13 cipher. The decoded text will be

Yaw ruoy no era uoY

Reverse this text to get the final message.

Answer: You are on your way

4) **Remove unauthorized user alana**

In the search bar, search **Computer Management** > **Local Users and Groups** > **Users** > Right-click on **alana** > Delete > Yes > OK

5) **User ethan has a password**

In the search bar, search **Computer Management** > Local Users and Groups > Users > Right-click on **ethan** > Click on **Set Password..** > Proceed. In the **New password** field, enter a secure password. In the **Confirm password** field, re-enter your password. Select OK > OK.

6) **User tina is not an administrator**

Click on the search bar > Settings > System > Accounts > Other users > **tina** > Change account type > Click on the dropdown arrow, select **Standard User** > OK

7) **User peterson is not an administrator**

Click on the search bar > Settings > System > Accounts > Other users > **peterson** > Change account type > Click on the dropdown arrow, select **Standard User** > OK

8) **Changes insecure password for josiah**

In the search bar, search **Computer Management** > Local Users and Groups > Users > Right-click **josiah** > Set Password.. > Proceed > In the **New password** field, enter a secure password. In the **Confirm password** field, re-enter your password. Select OK > OK.

9) **Created group SpiderVerse**

In the search bar, search **Computer Management** > Local Users and Groups > Groups > Action > New Group… > In the **New Group** field type **SpiderVerse** and select **Create**.

10) **Added users to group SpiderVerse**

In the search bar, search **Computer Management** > Local Users and Groups > Groups > **SpiderVerse** > Add.. > in the field that says Enter the object names to select, enter esther;wyatt;turner;tina, then select **Check Names**, **Create,** and **Close.**

11) **A sufficient password history is being kept**

Press the **Windows key + R** and search **secpol.msc** > Account Policies > Password Policy > Enforce password history > set to 5 passwords remembered > Apply > OK

12) **Passwords must meet complexity requirements**

Press the **Windows key + R** and search **secpol.msc** > Account Policies > Password Policy > double-click Password must meet complexity requirements > Enabled > Apply > OK

13) **A secure lockout threshold exists**

Press the **Windows key + R** and search **secpol.msc** > Account Policies > Account Lockout Policy > Account lockout threshold > set to 5 > OK > OK

14) **Audit Credential Validation [Success]**

Press the **Windows key + R** and search **secpol.msc** > Advanced Audit Policy – Configuration > System Audit Policies – Local Group Policy Object > Account Logon > Audit Credential Validation > check the box **Configure the following audit events: and Success** > Apply > OK

15) **User wyatt can no longer manage the auditing and security log**

Press the **Windows key + R** and search **secpol.msc** > Local Policies > User Rights Assignment > double-click Manage auditing and security log > wyatt > Remove > Apply > OK

16) **User darius can no longer take ownership of files**

Press the **Windows key + R** and search **secpol.msc** > Local Policies > User Rights Assignment > double-click Take ownership of files of other objects > darius > Remove > Apply > OK

17) **Limit local use of blank passwords to console only is set to enabled**

Press the **Windows key + R** and search **secpol.msc** > Local Policies > Security Options > double-click Accounts: Limit local account use of blank passwords to console only > Enabled > Apply > OK

18) **Don't display last signed-in is set to enabled**

Press the **Windows key + R** and search **secpol.msc** > Local Policies > Security Options > double-click Interactive logon: Don’t display last signed-in > Enabled > Apply > OK

19) **Firewall protection has been enabled**

In the search bar, search **Windows Security** > Firewall & network protection > Under Domain network, select **Turn On** > Yes > Under **Private network**, select **Turn On** > Yes > Under **Public network**, select **Turn On** > Yes

20) **Remote desktop sharing is turned off**

Press the **Windows key + R** and search **gpedit.msc** > Computer Configuration > Administrative Templates > Windows Components > Remote Desktop Services > Remote Desktop Session Host > Connections > Allow users to connect remotely by using Remote Desktop Services > Disabled > Apply > OK

21) **Enumerate administrator accounts on elevation set to disabled**

Press the **Windows key + R** and search **gpedit.msc** > Computer Configuration > Administrative Templates > Windows Components > Credential User Interface > double-click **Enumerate administrator accounts on elevation** > Disabled > Apply > OK

22) **File sharing disabled for hidden share USERS$**

Press the **Windows key + R** and search **fsmgmt.msc** > right-click **USERS$** > Stop Sharing > Yes

23) **Simple TCP/IP Services have been stopped and disabled**

Press the **Windows key + R** and search **services.msc** > scroll down to Simple TCP/IP Services and double-click on the service. Next to Startup Type, change Automatic to Disabled. View the status of this service (Service Status). If the status is Running, click Stop > Apply > OK

24) **Remote Registry service has been stopped and disabled**

Press the **Windows key + R** and search **services.msc** > scroll down to Remote Registry. Double-click on the service. Next to Startup Type, change Automatic to Disabled. View the status of this service (Service Status). If the status is Running, click Stop > Apply > OK

25) **Windows automatically checks for updates**

Press the **Windows key + R** and search **gpedit.msc** > Computer Configuration > Administrative Templates > Windows Components > Windows Update > Manage end user experience > Right-click Configure Automatic Updates > Enabled > Apply > OK

**26) Update Notepad++**

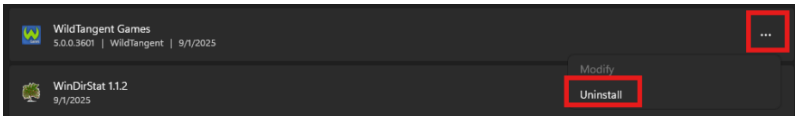

Open Notepad++ > ? > About Notepad++ > Click on the link to the Notepad website https://notepad-plus-plus.org > **Current Version 8.9.8.1** > Download Notepad++. Close out of the Notepad++ window if it is still open anywhere on your system. Open File Explorer and click on the npp8.9.8.1.Installer.x64 Application file > Yes > OK > Next > I Agree > Next > Next > Install > Finish

**27) Removed prohibited MP3 files**

Open File Explorer > This PC > Local Disk (C:) > Users > Public > Public Music. Click to select all of the files in this directory and then click on the Delete icon  at the top of File Explorer.

**28) Removed WildTangent Games**

Open **Control Panel** > Programs > Programs and Features > Click on the three-dot menu option **WildTangent Games**> Uninstall > Uninstall > Click the check-box next to WildTangent Games App 5.0.0.3601 > Next > Yes > OK

**29) Removed WinDirStat**

Open **Control Panel** > Programs > Programs and Features > Click on the three-dot menu option **WinDirStat 1.1.2** > Uninstall > Uninstall > Yes > Uninstall > Close

**30) Removed Wireshark**

Open **Control Panel** > Programs > Programs and Features > Click on the three-dot menu option **Wireshark 4.4.0 x64** > Uninstall > Yes > Next > Next > Uninstall > Next > Finish

**31) Removed netcat backdoor**

You must end the process first to delete the file. Type **Task Manager** in the search box, scroll to find **mfc** under Processes. Right-click on **mfc**, Open file location, select End task in Task Manager. Go to **mfc.exe** in File Explorer under C:\Windows\System32 and delete the file.

**32) Windows SmartScreen configured to warn or block**

Press **Control + R** to open the run dialogue. Type in **gpedit.msc** > Computer Configuration > Administrative Templates > Windows Components > File Explorer > double-click on Defender SmartScreen > Enabled > Apply > OK.

## Penalties

- Account lockout policy less than 5 is deprecated
- Google Chrome is not installed at the default location
- Notepad++ is not installed at the default location
